

V4046C, V8046C Magnetic Valves

SPECIFICATION DATA

APPLICATION

The V4046C and V8046C Magnetic (solenoid) Valves provide On-Off control of natural or LP gas flow for pilot burners in commercial and industrial applications.

SPECIFICATIONS

Models: See Table 1.

Types of Gas: Suitable for all domestic gases including high sulfur content LP gas.

Valve Material: Aluminum.

Valve Pattern: Straight-through.

Pipe Size: See Fig. 1.

Dimensions: See Fig. 2.

Valve Action on Power Failure: All models close in one second maximum.

FEATURES

- Normally closed valves which open immediately when energized.
- V4046C is for line voltage applications; V8046C is for 24 Vac applications.
- Provides on-off control of manufactured, Liquefied Petroleum (LP), and natural gases with high sulfur content.
- Used with pilot burners in industrial applications.
- All models close in one second (maximum) on power failure.
- Heavily loaded spring plunger maintains valve seating when the coil is de-energized, permitting the valve to be mounted in any position.
- Valve may be pipe-mounted or mounted on bracket support furnished by the installer.
- Powerhead assembly can be rotated 360 angular degrees.
- Solenoid coil is field-replaceable without removing the valve body from the piping connection.

Mounting:

Can be mounted in any position. Mounts directly in pipe line or on a support bracket. See Fig. 2 for tapped holes provided in bottom of valve body. Conduit outlet on powerhead can be rotated through 360 degrees with respect to valve body.

Wiring Connection: Two 36-in. (915 mm) leadwires; 1/2 in. conduit bushing.

Ambient Temperature Range: -40°F to +125°F (-40°C to +54°C).

Approvals:

Underwriters Laboratories, Inc. Listed: File NO. MH1639, V3, S3; Guide No. YIOZ; V4046C, V8046C for gas.

Factory Mutual Listed: V4046C, V8046C for gas.

Gas Valve Sizing

- Check the burner nameplate for:
 - the type of gas used, and
 - the gas flow capacity. The capacity will be listed in British thermal units per hour (Btuh) or in cubic feet per hour (cfh).
- Contact the local gas utility for information regarding:
 - the specific gravity (sp gr) and
 - the Btu per cubic foot (Btucf) for the type of gas used.

- Find the capacity in cfh. If the capacity is listed in Btu, convert to cfh using the following formula:

$$\text{Capacity in cfh} = \frac{\text{Btuh (burner nameplate)}}{\text{Btu/cu ft (gas utility)}}$$

- For gases with specific gravity other than 0.64, multiply the burner cfh using the proper conversion factor in Table 4.

Table 4. Gas Conversion Factors.

Type of Gas	sp gr (average)	Multiply cfh by
Manufactured	0.60	0.968
Mixed	0.70	1.046
LP-Propane	1.53	1.546
LP-Butane	1.98	1.759

- Use the corrected burner capacity in cfh when determining the gas valve size in Fig. 1.
- Determine the maximum pressure drop to be taken across the valve. If pressure drop is not in pounds per square inch (psi), multiply the value in known pressure units by the conversion factor.
- Plot the capacity (cfh) vs. pressure drop (psi) in Fig. 1 to find the proper valve size.

NOTE: Use the corrected cfh for gas other than 0.64 sp gr.
